FELLOWSHIP AND

AWARDS

Edward E. Zajac Prize for the Best Third-Year Paper (Honorable Mention) 2023 Steve Manos Prize for the Best Second-Year Paper (Honorable Mention) 2022

University of Arizona Graduate Fellowship, 2020

Teaching University of Arizona, Sole Instructor

ECON300 Microeconomics Analysis For Business Decisions Online

University of Arizona, Teaching Assistant

ECON460 Industrial Organization ECON462 Firms, Markets, and Competition

ECON551 (MBA) Business Strategy ECON407 Economics of Strategy

ECON508 (Ph.D.) Applied Economic Analysis

RESEARCH Research Assistant to Mo Xiao, University of Arizona 2023 - 2024

Assistant Research Assistant to Eric Hamilton, Pepperdine University 2016 - 2020

WORKING PAPERS Closing the Opioid Use Disorder Treatment Gap:

Expanding Nurse Practitioners' Prescriptive Authority

The Comprehensive Addiction and Recovery Act (CARA) of 2016 allows Nurse Practitioners (NPs) to prescribe buprenorphine independently to combat the opioid epidemic. Using a Difference-in-Differences analysis, this study finds that the policy leads to a 27% increase in NPs prescribing buprenorphine, a 16% rise in buprenorphine consumption, and an 11% reduction in opioid-related mortality. However, the policy also reveals potential moral hazards, unequal access in rural areas, and a shift in treatment focus away from comprehensive specialized programs.

Anatomy of Opioid Diversion: Examining Supply-Side Curtailment

With Mo Xiao, Chuan Qin

Rogue pharmacies worsen the opioid epidemic by diverting opioids to non-medical users. Using pharmacy-level opioid shipment and hospital diagnosis data, we examine the spatial redistribution of opioid shipments after targeted shutdowns by the Drug Enforcement Administration. A structural model reveals that over half of pharmacy-distributed opioids were diverted to non-medical use. Aggressive pharmacy crackdowns may drive non-medical users who lose access to black markets towards more dangerous narcotics like heroin and fentanyl.

Anatomy of a Scandal: #Batterygate and Consumer Choice

I link over 35,000 individuals' Twitter behaviors to their offline phone purchases to examine the heterogeneous consumer response to Batterygate, where Apple slowed down iPhone processors without acknowledgment in 2017. Using a novel trend-extrapolated Differences-in-Differences technique, I find that Batterygate only negatively impacts potential consumers, not the current user base, highlighting the importance of consumer heterogeneity in determining customer responses to negative media sentiment.
